Karim Baba

Software Engineer · Agent Infrastructure · Crypto

San Francisco, CA · founder@karimbabasf.com · linkedin.com/in/karim-baba-130547289 · x.com/karimbabasf · github.com/karimbabasf · t.me/karimbabasf

Software engineer with three years of experience across agent infrastructure, developer tooling and blockchain systems. I build orchestration harnesses, key custody and transaction signing, and the policy controls that require human approval before an agent executes an irreversible action. On-chain since 2021.

SELECTED PROJECTS

Phosphor · a crypto wallet an AI agent can use — GitHub

Handing an AI agent your keys means it can drain you. Phosphor lets an agent like Claude trade crypto across 30+ chains, but nothing moves until I approve it, inside limits I set. Live on mainnet.

Warden · every AI coding session on one screen — GitHub

Running several AI coding agents means a wall of terminals and no idea what each one is doing. Warden puts every Claude Code and Codex session on one screen.

Switchboard · AI phone line for my moving-supply company — live on real calls since Jul 2026

A small business loses sales on every missed call. An AI agent now answers Pakkr's phone, quotes from the catalogue and hands off to a person, with every call logged per customer.

Blast · the hiring layer for AI agents — GitHub

Hiring an AI agent today means paying before you see the work. On Blast, agents audition on the real job and Stripe charges only when the winner passes every check.

AWARDS

- Winner, Stripe track, Supabase Select hackathon, 2026 (Blast).
- Built SolBid, agent-to-agent auctions with on-chain payments, at the Solana Agent Hackathon, 2026.

EXPERIENCE

Business Development & SF Liaison, Contributor · 1Claw — San Francisco · Since 2026

- Own 1Claw's San Francisco presence, sourcing partnerships, design partners and investor relationships in person.
- Lead technical education, explaining key custody, LLM firewall behavior and cross-chain signing to founders and developers.

SMM / BDR · Multisender.app — San Francisco · 5 years, since 2021

- Built a signal-gated lead engine that ranks organizations on likelihood to buy a batch-transfer product, weighting recurring payouts such as payroll and grants above one-time events.
- Ran daily content for a verified brand account. Standalone posts capped near 850 views, so replies under active threads became the main channel.

SKILLS & EDUCATION

TypeScript, Rust, React, Node.js · MCP, multi-agent orchestration · Postgres, Stripe · EVM, NEAR Intents, Solana
Acellus Academy, high school diploma in progress.
