Software engineer with three years of development experience across agent infrastructure, developer tooling and on-chain systems. I design and ship the operational layer autonomous agents depend on: orchestration harnesses, key custody and transaction signing, and the policy controls that require human authorization before an agent moves capital. Five years of on-chain experience since 2021 informs the smart-contract and DeFi side of that work. The other half of my work is people. Since relocating to San Francisco I have built a network across the city's crypto and AI ecosystem, sourcing partnerships at conferences, meetups and inside founder and investor circles. I am how 1Claw shows up in San Francisco.

■ EXPERIENCE

Business Development & SF Liaison, Contributor · 1Claw

San Francisco · Since 2026

1Claw builds security and custody infrastructure for AI agents: key custody, an LLM firewall, and cross-chain transaction signing.

- › Run boots-on-the-ground BD, education, and advocacy for 1Claw across the SF crypto and AI ecosystem, sourcing partnerships and relationships at conferences, meetups, and within founder and investor circles.
- › Produce content and community programming to grow the protocol's awareness and credibility.
- › Contribute to the product codebase, bridging BD insight with hands-on engineering.

Founder / Developer · Independent Builder

San Francisco · Since 2025

- › Built and shipped a portfolio of working products from zero across AI infrastructure, crypto tooling, and creator tools, with a strong grasp of system architecture and protocol design.
- › Currently building Phosphor: a DeFi harness powered by the AI subscription you already pay for, where the agent proposes and only a human approves. Live on mainnet with chain abstraction and Hyperliquid perpetuals.

■ SELECTED PROJECTS

Warden · multi-agent orchestration for AI coding [GitHub](#)

macOS desktop app that brings your local AI coding agents into one unique live view: active sessions, process state, token spend, context window usage, and file activity.

TAURI · RUST · REACT / TS

Phosphor · agent-driven DeFi with a human approval gate [GitHub](#)

Local desktop application exposing 52 MCP tools, so an existing AI agent subscription can operate DeFi positions: key custody, a policy engine that simulates and budget-checks every write, and in-app human approval. Chain-abstracted across five mainnets, plus Hyperliquid perpetuals.

TAURI · RUST · TYPESCRIPT · MCP · VIEM

DevSignal · autonomous developer-news publisher first shipped product, 2026

Personalized developer-news scraper that turns a feed into an autonomous AI publisher. Built end to end at an AWS hackathon.

NEXT.JS · SUPABASE

Cliptic & Teleprompt · creator tooling

On-device vertical-video caption editor with a deterministic caption engine, plus a shipped iPhone teleprompter-recorder.

TYPESCRIPT · REACT · VERCEL

■ CRYPTO

- › In crypto since 2021, with deep, hands-on DeFi and Ethereum familiarity.
- › Early to the L2 wave, among early users of Arbitrum, Optimism, and zkSync.
- › Active trader since 2021, with significant personal volume across cycles.
- › Regular at SF events: Solana Summer Series, Cursor Compile, Founders Inc, and more.

■ STRENGTHS

- › **Sourcing and network.** At ease in rooms with founders and high-status operators.
- › **Fast conceptual learner.** New tech and architectures quickly, with strong pattern recognition.
- › **Builder's eye for diligence.** I read a protocol's architecture and on-chain activity, not just its deck.
- › **Self-accountable.** Every project above was self-initiated and self-driven.

■ EDUCATION & LEARNING

- › Self-directed study in software engineering, smart-contract architecture, and DeFi mechanics.
- › Acellus Academy, high school.
