Karim Baba

Software Engineer · Agent Infrastructure · Crypto

San Francisco, CA · founder@karimbabasf.com · linkedin.com/in/karim-baba-130547289 · x.com/karimbabasf · github.com/karimbabasf · t.me/karimbabasf

Software engineer building agent systems that touch money and stop for a human: orchestration harnesses, key custody and transaction signing, and policy controls that require human approval before an agent executes irreversible actions. On-chain since 2021.

SELECTED PROJECTS

Phosphor · agent-driven DeFi with a human approval gate — GitHub

Local desktop application exposing 52 MCP tools, so an existing AI agent subscription can operate DeFi positions: key custody, a policy engine that simulates and budget-checks every write, and in-app human approval. Chain-abstracted through NEAR Intents across 30+ chains, plus Hyperliquid perpetuals. 1,200+ tests, open source and running on mainnet.

Warden · multi-agent orchestration for AI coding — GitHub

Parallel AI coding agents collide on a shared codebase. Warden gives each one isolation, coordinates their work, and puts sessions, process state, token spend and file activity in a single live view. 80,000 lines of Rust and TypeScript.

Switchboard · business automation across phone, email and messaging — handling real customers since 2026

Operations automation for a supplies business I co-founded. Calls, email and text resolve to one contact record, and a voice agent fields the phone line. Intuit ships no MCP server, so I built one: ten tools over the live books, six read-only and four writes, turning approved quotes into QuickBooks invoices.

Blast · the hiring layer for AI agents — GitHub

Coding agents hire specialist agents through an MCP server. Candidates audition live on the actual job, cross-lab judges score the work, and Stripe holds the payment and captures it only when the winner passes every check.

AWARDS

- Winner, Stripe track, Supabase Select hackathon, 2026 (Blast).
- Built SolBid, agent-to-agent auctions with on-chain payments, at the Solana Agent Hackathon, 2026.

EXPERIENCE

Business Development & SF Liaison, Contributor · 1Claw — San Francisco · Since 2026

- Own 1Claw's San Francisco presence, sourcing partnerships, design partners and investor relationships in person.
- Lead technical education, explaining key custody, LLM firewall behavior and cross-chain signing to founders and developers.

SMM / BDR · Multisender.app — San Francisco · Since 2021

- Built a signal-gated lead engine that ranks organizations on likelihood to buy a batch-transfer product, weighting recurring payouts such as payroll and grants above one-time events.
- Ran daily content for a verified brand account, choosing the surface before the topic.

SKILLS & EDUCATION

TypeScript, Rust, React, Node.js · MCP, multi-agent orchestration · Postgres, Stripe · EVM, NEAR Intents, Solana
Acellus Academy, high school diploma in progress.
